

Designed to be the Tradeperson's first choice as a multi-purpose cutting blade, which will work with power and control in a variety of mediums. It is perfect for general purpose cutting of wood based materials, plastics, plasterboard, laminates, sheet materials, aluminium and other soft, non-ferrous metals.

SAFETY AND FITTING INSTRUCTIONS!

IMPORTANT! Ensure that the Grinder is unplugged before proceeding.

PLEASE READ THESE INSTRUCTIONS CAREFULLY TO ENSURE SAFE OPERATION.

1. This tool must only be used on an angle grinder fitted with the original metal guard and the auxiliary handle.
2. Set the metal guard at approximately 45 degrees to the body of the angle grinder as in diagram 1, with the disc rotating such that it pulls away from the user. Do not remove the grinder's original metal guard.
3. Do not set the auxiliary handle on the wrong side of the grinder see diagram 2, as this causes the disc to rotate in the wrong direction with the subsequent loss of control.
4. Use the enclosed nylon washer if a 16mm bore is required.
5. Ensure the angle grinder switch is in the OFF position before connecting the power.
6. Always wear faceshield or safety goggles, ear plugs, lung protection, gloves and protective clothing.
7. ALWAYS use BOTH hands to operate the grinder. The workpiece must be firmly secured.
8. Do not use near unprotected persons.
9. Ensure the angle grinder has completely stopped before placing down.
10. Keep sharp. Do not use when blunt. Do not apply excessive force.

WARNING:

Failure to comply with important safety and fitting instructions on this package may result in serious injury.

The Tuff Cut blade must only be used on angle grinders which are fitted with the original metal guard and auxiliary handle.
